1. Rather than clicking and testing every link yourself every time something changes, Selenium automates that. Essentially, it eliminates manual testing.
2. Some interactive elements may not be able to be as easily tested, especially if some flash elements are used. As well, it may not be entirely accurate depending on your internet connection.
3. <tr><td>MyCase</td></tr>
4. <tr>
    <td>click</td>
    <td>//a[@id='myLink']/</td>
    <td></td>
   </tr>
5. One can easily store all tests for a certain case in one html file, which is simply accessed by a table. Then again, each case must be stored in a single html file, causing a bit of clutter.
